Dear Sphere Energy Hiring Team,

I am writing to apply for the Software Developer position at Sphere Energy. I am a Software Engineer at Oracle MADC with a strong interest in building intelligent, production-ready products. Sphere Energy's mission to apply AI to real engineering challenges is especially compelling to me: it brings together the practical software engineering, AI integration, and end-to-end product thinking that I want to deepen in my next role.

In my current role, I build backend features and integrations using Java/Spring Boot, REST and GraphQL APIs, BFF services, relational data models, and microservice patterns. I contribute to dependable delivery through GitLab CI, automated JUnit/Mockito tests, code reviews, debugging, and documentation. During my FastAPI internship at Oracle MADC, I developed Python APIs for a cloud-monitoring platform, working with validation, PostgreSQL-oriented data workflows, unit testing, and service stability.

Alongside this experience, I built an AI Workflow API prototype in Python/FastAPI that integrates LLM APIs into task workflows. The project includes REST endpoints, PostgreSQL persistence, a Docker-based local setup, and unit tests. This hands-on work has strengthened my interest in turning generative AI capabilities into useful, maintainable software products—an area that aligns closely with Sphere Energy's focus on AI-enabled engineering solutions.

I would bring a practical foundation across Python, Java, JavaScript/React, FastAPI, microservices, Docker, Kubernetes, CI/CD, and observability tooling, together with a willingness to learn quickly and take ownership. I value clean interfaces, testing, and thoughtful technical trade-offs, and I would be excited to contribute these habits to your client-facing, high-impact projects.

Thank you for your consideration. I would welcome the opportunity to discuss how my background and motivation can contribute to Sphere Energy's growing team.

Sincerely,

Oussama Badreddine
